

### Bag Installation

1 Installing the ZUCA insert bag in the ZUCA frame is easy. First, take the bag and open the main front zipper. Reach inside and form the bag into the shape of the frame. Next, from the top of the bag **remove the backed fabric fastener**, and set aside these two fabric fasteners, but don't remove the wax paper just yet.

2 Turn the frame upside down and look under the seat between the telescoping handle and the round grip hole. There are two spaces where you will adhere the fabric fastener strips you set aside earlier. Now with the wax paper removed, **affix the fabric fasteners to the underside of the seat, as shown.**

3 Next, insert the bag into the front opening of the frame. Unzip the zipper tubes located on both sides of the main opening so that you can zip them around the front metal tubes.

4 Be sure to start the zipper on a straight section of the front metal tubing, because it is easier to get started here, than on the curved section. Also, be sure the zipper is mated completely before you start zipping.

5 Once you've done that, zip down both zippers a short distance. Then slide into place over curved section of the metal tubes and finish zipping. Fold over both ends with the **protective fabric fastener tabs** located on the top and bottom of each zipper tube. Find the **fabric fastener tabs** that hold the bag to the back of the frame and fasten them. You're almost done. Just one more step...

6 From the main front opening, fold the floor panel into place and form the bag into the frame. Adhere the fabric fastener on the top of the bag to the fabric fastener you placed under the seat. Make any last necessary adjustments so that your bag sits smoothly in its frame.

#### Care

ZUCAs are hand washable. Please close all fabric fastener tabs and hand wash your ZUCA insert bag in cold water with a mild soap. Rinse well and hang dry or you may also dry in frame.

#### Warnings

Do not stand on your ZUCA. Do not sit on your ZUCA with the handle up. Do not ride your ZUCA or pull someone sitting on your ZUCA. The ZUCA Sport is designed to hold a normal sitting load of up to 300 lbs providing your ZUCA is on a firm level surface.
